INTRODUCTION

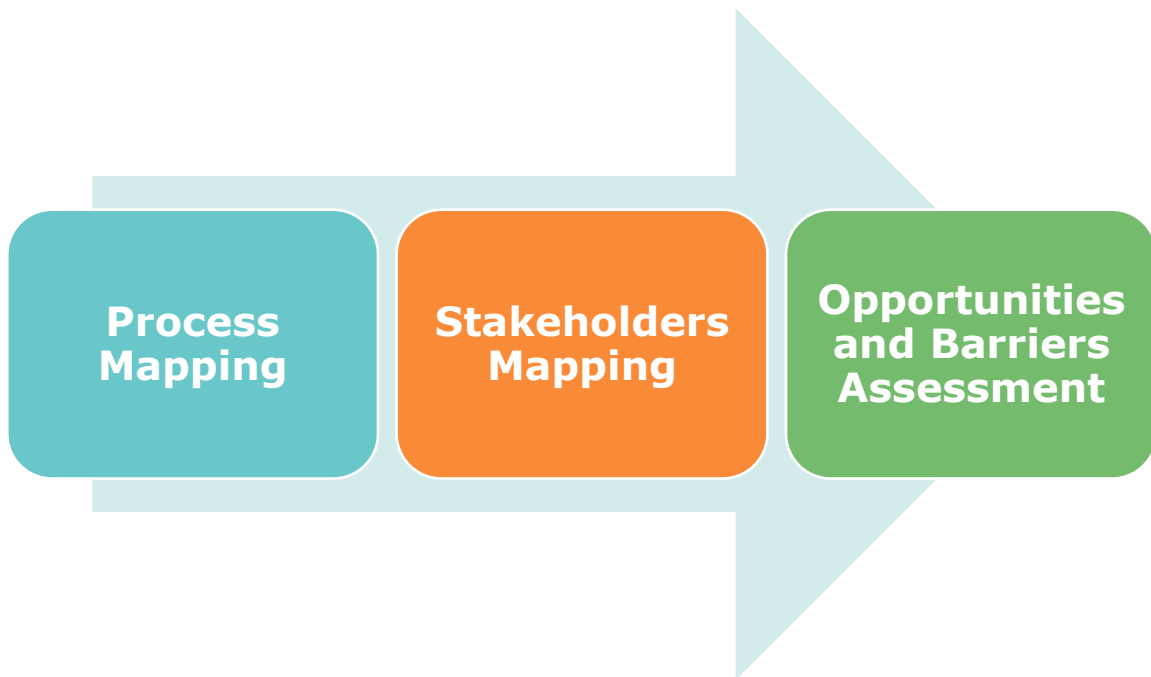

Dr. Fadel ELZUBI and Eng. Eyas Shuaibi are pleased to present their interest in supporting the UNDP in the mission of **PIF Food Systems Literature Review**.

Both experts are involved in the preparation of a number of national strategies related to the economic development of Jordan, as well as other countries, with a special focus on food security, food systems, agricultures, climate, energy and water resources.

Thus, this mission falls right within the domain of expertise of the two experts and provides for a rich platform of exchange of ideas within this mission as well as the future roadmap when it comes to developing initiatives.

APPROACH

The approach for this mission is simplified due to the pressure of time and will go through the following key tasks:

PROCESS MAPPING

In this step we will be taking a food systems approach to be tackled from a global perspective as well as the local context within Jordan. In this approach it is our aim to be able to identify, analyze and assess the impact and feedback of the systems different actors (or stakeholders), activities and outcomes to help identify intervention points for enhancing food security.

ACTORS/STAKEHOLDERS MAPPING

Along the process of process mapping for Jordan, actors involved from various systems: Systems can also exist within systems, for example, farming systems, agricultural ecosystems, economic

systems, and social systems and within those are further subsets of water systems, energy systems, financing systems, marketing systems, policy systems, culinary systems, and so on.

We will expend best efforts to categorize actors with priorities to their importance and influence; all in light of the specific situation in Jordan.

OPPORTUNITIES AND BARRIERS ASSESSMENT

As the picture of the food systems in Jordan emerges, the next level of detail to be tackled will be with barriers and opportunities that exist.

These barriers will largely depend on the explored context related to the food systems in Jordan and associated stakeholders.

The process of extracting these barriers will largely come from the internal knowledge of the experts (Fadel and Eyas) and possibly and as time allows by some select contacts with persons/agencies of relevance.

Opportunities will be naturally envisioned from the nature of those identified barriers and how they relate to food systems.

TIMELINE

It was already specified to us that the overall timeline is 4 weeks.

We expect it to look like the following:

	1	2	3	4
Inception Report				
Process Mapping				
Stakeholders Mapping				
Opportunities and Barriers Assessment				

FINANCIALS

	Days	Rate (\$)	Total (\$)
Fadel Elzubi	18	\$ 500	\$ 9,000
			\$ 9,000

Payment Terms

- 1. 25% at Inception Report
- 2. 75% at Final Report
